

CoverSkin[®]

Universal skin protection for at least 6 hours

Protects the skin from side effects at contact with water-soluble and non water-soluble cooling lubricants, hydraulic oils, dielectrics, glues and all kinds of plastics.

Application:

Apply on your dry and free of grease hands. Do not use more than the size of a walnut of our CoverSkin and rub until completely absorbed. CoverSkin finds its way into the top layer of the skin and then forms a protection against changing working materials which lasts at least 6 hours.

CoverSkin protects your skin from water-soluble and non water-soluble mediums. At chained operating processes with oil and water-soluble products a change of your skin protection is not necessary.

CoverSkin protects against contact allergies which are caused by dusts and removal particles.

CoverSkin is non hazardous to eyes, mucosas and food.

Additional application recommendations:

Dielectrics

Rub your hands and mind especially your nailbeds and the area under your finger nails. By using **CoverSkin** you can prevent inflammations caused by removed particles.

Cooling lubricants etc.

CoverSkin prevents skin itches and aczemas which are caused by dusts and chips. On dry wounds **CoverSkin** prevents wound infections as good as possible.

Duroplasts, hardeners, glues, solvents

By using **CoverSkin** soilings can be easily removed. Random or unavoidable contact with these substances and solvents remain without consequences.

Skin care

Applying **CoverSkin** after work can make special skin care dispensable.
